

Wolfie Sync Agent

Overview

Wolfie Sync Agent is a lightweight software installed in restaurant kitchens. It reads the POS system, monitors kitchen activity, and sends real-time events to the Wolfie platform — even if the POS itself is limited.

Architecture

Files

File	Purpose
sync_agent.py	Main agent (install on restaurant PC)
routes/sync.py	Flask API endpoints (backend)
database/schemas_sync.py	Database tables
tasks/score_calculator.py	Celery task for scoring

Installation

1. Backend Setup

```
# Add to app.py
from routes.sync import sync_bp
app.register_blueprint(sync_bp)

# Add to celery_app.py beat_schedule
"calculate-scores-6h": {
    "task": "tasks.score_calculator.calculate_all_scores",
    "schedule": crontab(minute=0, hour="*/6"),
}
```

2. Agent Installation (Restaurant)

```
# Download agent
curl -O https://wolfie.com/download/sync-agent.py

# Install dependencies
pip install watchdog requests

# Run
python sync_agent.py \
  --restaurant-id <RESTAURANT_UUID> \
  --api-key <API_KEY> \
  --api-url https://api.wolfie.com/api/v1/sync
```

POS Support

POS System	Status	Detection Method
Square	✅ Auto	File system scan
Toast	✅ Auto	File system scan
Clover	✅ Auto	File system scan
Lightspeed	✅ Auto	File system scan
Custom	✅ Manual	--pos-path flag

Score System

After 3-4 days of data collection, each restaurant gets a **Wolfie Score**:

Component	Weight	Description
Speed	30%	Average prep time vs benchmark
Accuracy	25%	ETA prediction accuracy
Consistency	20%	Low variance = reliable
Reliability	15%	Uptime, error rate
Customer	10%	Average rating

Tiers

Score	Tier	Badge
90-100	Wolfie Pro	🏆
80-89	Gold	🥇
70-79	Silver	🥈
50-69	Bronze	🥉
<50	Unranked	—

API Endpoints

Endpoint	Method	Auth	Description
/api/v1/sync/register	POST	None	Register new agent
/api/v1/sync/ heartbeat	POST	Agent	Health check
/api/v1/sync/ order-event	POST	Agent	Real-time event
/api/v1/sync/score/ <id>	GET	Public	Get restaurant score
/api/v1/sync/ agent-status	GET	Agent	Agent dashboard

Offline Mode

If internet drops:

1. Events saved to ~/.wolfie/sync_agent.db
2. Agent retries every 60 seconds
3. When connection returns: batch upload

Security

- Device fingerprint (SHA256 of hardware info)
- API key per agent
- HTTPS only
- No sensitive data stored locally
